

Every motion has an alibi.

Motion is used like punctuation: at the opening, at each chapter's anchor object, and at the moment of decision. The rest of the page holds still so those moments land.

THE FIRST TEN SECONDS

0.0 S

Ivory page. The document rule draws itself across the header (500 ms). Nothing else yet.

0.4 S

“Out of” rises out of a mask, line by line, 90 ms stagger. Kicker fades in above.

1.1 S

“spec.” lands in terracotta. The full stop arrives last with a 2px drop — the only bounce on the site.

1.6 S

The whistle slides in from the right and settles at -14°. Its caption types out. Idle wobble begins.

FIRST SCROLL

Hard cut to navy. Reveal lines are pinned; each scroll step brightens the next line from gold to ivory.

NO.	WHERE / TRIGGER	BEHAVIOUR	WHY IT EARNS ITS PLACE
01	Hero · scroll 0→30%	“Out of” drifts left, “spec.” drifts right (±40 px). The headline literally goes out of alignment.	The concept, acted out once.
02	Whistle · pointer near	Tilts ±8° toward the cursor. Click: three dashed “sound” strokes burst from the mouthpiece.	First clue that the page is playable.
03	Spec-o-meter · live	Needle creeps toward the red zone as 6 Oct approaches; split-flap tiles count down, the seconds flap drops every tick.	A countdown that belongs to engineers.
04	Index rows · hover	Gold fill sweeps left→right (250 ms), motif icon tilts -12°, arrow moves 6 px.	Previews that each row is a door.
05	Event cards · hover / swipe	Card lifts 6 px and tilts -0.5°; its motif wakes up (map path draws, lens fills, rings spin faster). Mobile cards snap one per swipe.	Five personalities, one short page.
06	Hunt · redaction	Hover / tap a gold bar to declassify it. “Nice try. Clues drop on 06:10.”	Mystery you can touch.
07	Workshop · 40% in view	The notebook diagram draws itself stroke by stroke; the “+” is drawn last.	Learning shown as a process.
08	Brand · in view	Grid fades in, circles construct in order, the lens fills terracotta. Pointer nudges the circles ±6 px.	How a logo is really made.
09	Charades · in view	Banned words get struck through one at a time. Tapping one shakes it: “nope.”	The rule of the game, played.
10	Garba · always	Rings counter-rotate slowly; speed follows scroll velocity, then eases back.	Circular movement is the event.
11	Flow · drag / arrow keys	Scrub a cursor along the signal. Tag shows event, time and its CTA. Arrow keys jump between the five stops.	A timeline you play, not read.
12	Tickets · hover / click	Stub separates 3 px along the perforation. Click opens that event's sheet from the right (bottom on mobile).	Registering feels like tearing a ticket.

LOADING & TRANSITIONS

No loading screen. Text paints first in Georgia with a size-adjusted fallback, then swaps to Gloock. Grounds change with hard cuts at section edges — never gradients. Registration sheets slide in over 280 ms and get their own URL (/register/hunt), so they can be shared and the back

REDUCED MOTION

prefers-reduced-motion: all reveals become instant, rings and wobble stop, parallax off, diagrams render fully drawn, the Flow cursor jumps between stops. Nothing is hidden behind an animation, and every hover has a tap or focus twin.

PERFORMANCE BUDGET

Inline SVG only — no WebGL, video or stock photos. 4 subsetting font files, preloaded Gloock. Target JS ≤ 60 KB, LCP under 2 s on a mid-range phone on 4G. One IntersectionObserver drives every reveal.
